SUMMARY

Automation engineer with 20 years of hands-on experience connecting systems, cleaning data, and turning manual processes into reliable workflows. Currently running Berlin AI Labs, where I build and maintain production automation systems using APIs, webhooks, and workflow orchestration tools. Previously worked as an agile coach helping enterprise teams at Boehringer Ingelheim, FlixBus, and John Deere identify bottlenecks and automate them away, and as a software engineer building backend integrations at Disney, FedEx, and Ingram Micro. I am practical, detail-oriented, and I ship things that work without breaking.

RELEVANT EXPERIENCE

Founder & Automation Engineer — Berlin AI Labs

2022 – Present · Berlin, Germany

Running a small studio that builds workflow automation and data systems. Everything I build is live in production with automated deployments and monitoring on Railway.

SYSTEM	WHAT IT DOES	LINK
AgentOps Mission Control	Operations dashboard that pulls data from multiple APIs, normalizes it, and shows real-time system health. Built automated alerting, status tracking, and event monitoring workflows.	Live
ConvoGuard	Data pipeline that scans incoming messages in real time, detects sensitive information, and routes it for GDPR compliance. Connects via webhooks with automatic retries and error handling.	Live
Lead & Invoice Automation	End-to-end workflow connecting web forms to CRMs and accounting tools. Handles data cleaning, deduplication, validation, and automated notification emails for German SMBs.	Client production
Agent Pentest CLI	Open-source CLI tool published to npm that automates API security testing across 41 test vectors. Runs as a single command with structured output.	npm
Event Registration Systems	Built automated registration and check-in flows for community events. Form submission triggers webhook chains that validate data, send confirmations, and update tracking spreadsheets.	Internal

How I work: I connect tools via APIs and webhooks (forms, email, CRMs, databases, Slack). I build workflows with triggers, conditional routing, retries, and error handling so they run unattended. I clean and normalize messy data so downstream systems get reliable inputs. I set up dashboards and monitoring so non-technical teammates can see what is happening. I write automated tests and set up CI/CD so nothing deploys broken.

Agile Coach & Process Automation Consultant

2015 – 2022 · Boehringer Ingelheim, FlixBus, John Deere, Yara International

- Identified manual bottlenecks in engineering and operations teams, then proposed and built technical solutions to eliminate them
- Coached product owners on using data to prioritize work and measure outcomes instead of guessing
- Set up automated reporting dashboards, CI/CD pipelines, and workflow tools for cross-functional teams
- Facilitated workshops helping teams map their processes and find automation opportunities
- Led agile adoption for teams of 10 to 50 people across pharma, mobility, agriculture, and logistics

Software Engineer & Backend Developer

2005 – 2015 · The Walt Disney Company, FedEx, Ingram Micro

- Built backend API integrations connecting enterprise systems (ERPs, CRMs, logistics platforms)
- Developed automated data processing pipelines and reporting tools for large-scale operations
- Implemented system-to-system integrations via REST APIs, message queues, and batch processing
- Created automated testing and deployment workflows that reduced release cycles from weeks to days

SKILLS

Automation: API integrations, webhooks, n8n, workflow orchestration, cron jobs, event-driven triggers, retries and error handling

Data: Cleaning, deduplication, validation, normalization, GDPR compliance, audit trails, structured reporting

Stack: TypeScript, Node.js, Python, SQL, Railway, GitHub Actions, REST APIs, CLI tooling, Docker

Operations: Monitoring, incident response, automated testing (Jest, Playwright), CI/CD pipelines, system health dashboards

EDUCATION & LANGUAGES

M.Sc. Electrical Engineering — Tennessee Tech University, USA

B.E. Electrical Engineering — College of Engineering, Pune, India

Certified ScrumMaster (CSM) · Certified Agile Leadership

English C2 (native) · German B2 (professional)

WHY {TECH: EUROPE}

I have been watching what you are building and I think it is exactly the kind of operation that benefits from someone like me. You are running large-scale hackathons and community events across Europe, which means applicant tracking, registrations, check-ins, team matching, and communications all need to work smoothly at scale. That is what I do. I build the automation that connects your tools, keeps your data clean, and lets your team focus on the community instead of fighting spreadsheets. I have done this for enterprise teams at Fortune 500 companies and for my own production systems. I would love to do it for {Tech: Europe}.
